# Different Healthcare IT Perspectives

CereCore International leverages a heritage in clinical and IT operations with 30 years of EPR expertise **to align perspectives and** *build true collaboration.*

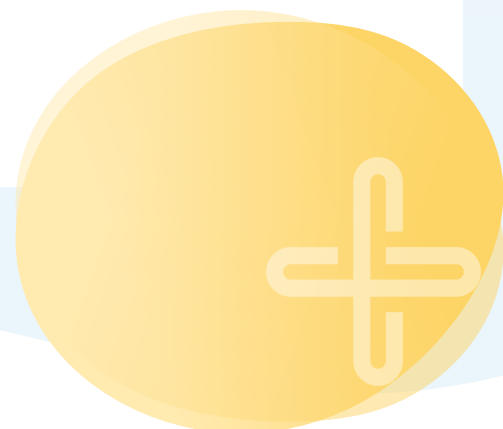

EPR Software Provider (ex: MEDITECH, Oracle Health, Epic)	EPR/HIT Partner	NHS/ Healthcare Provider
HOW THEY ADVOCATE FOR PROVIDERS		
Software implementation and functionality as designed	Bridging knowledge and resource gaps for the best possible project outcomes based on deep first-hand experience of the EPR platform adopted across multiple health systems and specialties	Clinical operations and workflows as specific to their organisation or specialty
PRIMARY FOCUS AREAS		
• Delivers EPR roadmap • Provides technical requirements • Offers best practices based on software design • Brings limited understanding of hospital operations	• Provides strategic recommendations based on a holistic view of how EPR implementations affects healthcare operations • Identifies risks and provides remediation suggestions • Supports change management and training plans • Champions data standardisation and interoperability • Accelerates progress with proven methodologies and tools (ex: assessments and automation) • Serves as advocate for NHS/healthcare providers back to EPR vendor	• Understands patient population needs, care providers and clinical workflows • Advocates quality care, patient safety and clinical and operational practices • Looks to outside perspective for EPR implementation expertise and best practices • Assesses IT roadmap for requirements • Plans and executes on additional technical needs such as third parties, interfaces, networks, and connectivity

How CereCore International can help:

MEDITECH | **Oracle Health (Cerner)** | **Epic** | **1200+ related applications**

The industry leader in EPR expertise, with deep experience in every area of the system, including implementation, optimisation, customisation, application management and interoperability projects in hundreds of hospitals. This applies to your success with:

- Fills resource gaps with EPR implementation and IT skillsets that are difficult to find in the UK. Our depth of experience speeds progress because consultants begin project work instead of requiring training. This trims EPR program costs in the long run.

- Proven to understand successful project management and implementation strategies and tailor them to the needs of the organization.

- Multi-EPR expertise allows a unique and pragmatic viewpoint on data standardisation and processes necessary for interoperability.

- Developed numerous automations to assist with data migration, dictionary build tasks, and financial process testing, which we leverage with clients to accelerate progress and accuracy in these and other scenarios.

- Helped numerous organisations navigate the transition to a different EPR platform. Our cross-EPR expertise and healthcare background helped ensure clinical processes were setup properly and staff were prepared for the changes.

- Delivers comprehensive Cybersecurity Advisory Services, including assessments, risk mitigation strategies, and incident response planning to protect sensitive health information.

- Supports data governance and integration efforts, ensuring data quality and seamless flow across systems for improved interoperability.

- Enhances analytics capabilities with predictive insights and standardisation solutions for optimised decision-making, improving healthcare outcomes for both patients and organisations.
